Story

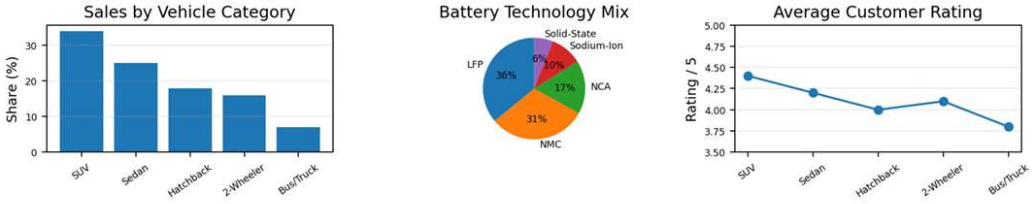

Date	25/10/2026
Team ID	Tanishka Jain
Project Name	**Electric Vehicle Market Performance & Insights**
Maximum Marks	5 Marks

A data story presents complex information in a clear, engaging sequence that helps viewers understand important patterns and make informed decisions. For the **Electric Vehicle Market Performance & Insights** project, the story brings key EV market indicators together to explain sales performance, battery adoption, and customer satisfaction.

The dashboard can be explored using filters such as year, manufacturer, vehicle category, country, and battery technology. Charts help compare which vehicle categories contribute most to sales, which battery technologies are most common, and how customer ratings vary across segments. These views can support market strategy, competitive analysis, and research into sustainable mobility.

Electric Vehicle Market Performance & Insights

Electric Vehicle Market Performance — Illustrative Dashboard

Observations

- **Vehicle Category:** In this illustrative example, SUVs account for the largest share of sales (34%), followed by sedans (25%).
- **Battery Technology:** LFP has the largest share in the example mix (36%), with NMC close behind at 31%.
- **Customer Satisfaction:** SUVs show the highest average rating (4.4/5), while buses and trucks have the lowest shown rating (3.8/5).
- **Business Use:** Comparing sales, battery mix, and ratings together can help identify strong market segments and areas for product improvement.
